**Impact Factor -- see below for calculations*

The journal impact factor is a measure of the frequency with which the "average article" in a journal has been cited in a particular year. The impact factor will help you evaluate a journal's relative importance, especially when you compare it to others in the same field. For more bibliometric data and information on this and other journal titles click on the "Return to Journal" button.

NOTE: Title changes and coverage changes may result in no impact factor for one or more years in the above graph.

2010 Impact Factor

Cites in 2010 to articles published in: 2009 = 144 Number of articles published in: 2009 = 892

2008 = 28

2008 = 224

Sum: 172

Sum: 1116

Calculation: $\frac{\text{Cites to recent articles}}{\text{Number of recent articles}} = \frac{172}{1116} = 0.154$

2009 Impact Factor

Cites in 2009 to articles published in: 2008 = 46 Number of articles published in: 2008 = 224

2007 = 1

2007 = 47

Sum: 47

Sum: 271

Calculation: $\frac{\text{Cites to recent articles}}{\text{Number of recent articles}} = \frac{47}{271} = 0.173$
